29. Additional comments regarding your report:

*Since the countermeasures against BSE have worked so well, the BSE prevalence drastically decreased and stays low worldwide.*

*Nowadays only several BSE cases (seven cases in 2021) were reported. Particularly, in the Asia and Oceania region, no BSE case has been reported except for Japan. Under these circumstances, simply we did not have chance to carry out the international diagnostic activity nor supply of reference material. We predict that this situation will not change suddenly.*
